Professor, Department of Medicine, University of Alberta
Adjunct Professor, School of Public Health, University of Alberta
Adjunct Professor, Department of Population Health Sciences, Duke University
CIHR Chair, Sex and Gender Differences, Diabetes
Heart & Stroke Chair in Cardiovascular Research
Calgary, AB

Biography

Dr. Kaul's research examines issues involving access and delivery of cardiovascular care at a population level; examining international differences in cardiovascular practice patterns and outcomes; and health economics. She is the Canadian Institutes of Health Research (CIHR) Sex and Gender Chair in Diabetes and one of her primary interests is looking at the burden of heart disease in women relative to men. She has expanded her interest in women's health by developing a longitudinal pregnancy and birth cohort to study the downstream effects of gestational diabetes mellitus and other pregnancy-related complications on the development of chronic disease in both the mother and the child.

Dr. Kaul has extensive experience working with population-level administrative data, clinical registries, as well as large, multinational clinical trials using an integrated database that links inpatient, outpatient, and vital statistic databases to examine cardiovascular care in Canada.

Dr. Kaul received her PhD from the University of Alberta and did a postdoctoral fellowship at Duke University.
